- Django is a high-level Python Web framework that encourages rapid development and clean, pragmatic design.
- Built by experienced developers, it takes care of much of the hassle of Web development, so you can focus on writing your app without needing to reinvent the wheel.
- It's free and open source.

# Django: a sophisticated web server

Easy to build better Web apps more quickly and with less code.

- Designed for rapid development of applications with quick concept to completion.
- Includes dozens of extras:
  - common Web development tasks
  - user authentication
  - content administration
  - site maps
  - RSS feeds
  - DATABASE SUPPORT (more about that later)

## Pip: the Python package installer

- The latest versions of Python (ver 3) come with pip
- To see if pip is already installed on your machine, type `piphelp`
- If pip is not already installed, try upgrading your Python to get a newer version.
- Alternatively, install pip yourself from source:  
`https://bootstrap.pypa.io/get-pip.py`

# Steps to set up a project

## Steps

- Get into a *working* directory.
- Use pip to install virtual environment software to build a working space
- Setup a virtual environment in which to work
- Activate the virtual environment
- Use pip to install Django to build project
- Use Django to build a project
- Run the project

## Get into a *working* directory

```
mkdir ~/djangoWorking/  
cd ~/djangoWorking/
```

# Python Virtual Environments

Another way to set up a virtual environment (called, “myvenv”)

Introduction  
to Database  
Systems:

Hang Zhao

Introduction

Django

Installation

Virtual Env

Setup Django

NewFiles

Output

Use Your Browser

Create Super User

Admin Controls

Some versions of Python already have *virtualizing* software already installed

- `python -m venv myvenv`
- or, `python3 -m venv myvenv`

If not ...

If not then you may have to research how to implement a virtual environment on your machine

# Steps to Set Up a Virtual Environment

## MacOS and Linux Commands

Carter  
Hang Zhao

Introduction

Django

Installation

Virtual Env

Setup Django

NewFiles

Output

Use Your Browser

Create Super User

Admin Controls

Some commands may require `sudo` for *superuser*

- Setup: Create an environment `myenv` for use with `python3`

- `python3 --menv myenv`

- Or `python --menv myenv`

- Activate the environment

- `source myenv/bin/activate`

- Install the Django software packages. Done once for each env.

- `pip install django`

- Or, `pip3 install django`

# Steps to Set Up a Virtual Environment

## Windows Commands

Introduction

Carter  
Hang Zhao

Introduction

Django

Installation

Virtual Env

Setup Django

NewFiles

Output

Use Your Browser

Create Super User

Admin Controls

- Setup: Create an environment `myenv` for use with `python3`

- `python3 -m venv myenv`
- Or `python -mvenv myenv`

- Activate the environment

- `cd myenv/Scripts/`
- Execute: `activate`

- Install the Django software packages. Done once for each env.

- `pip install django`
- Or, `pip3 install django`

# Setting-up Django

Your terminal should now say, (myenv)

Introduction

Output

Use Your Browser

Create Super User

Admin Controls

## Install Django in your virtualenv

```
python -m django --version # check version  
#or, python3 -m django --version # check version
```

## Create your first Django project!

```
django-admin startproject mysite
```

## Use manage.py to run the webserver to see your project!

```
cd mysite/  
# we are now in: djangoWorking/myenv/mysite  
python manage.py runserver  
# or, python3 manage.py runserver
```

## Use your browser to check your work

```
http://127.0.0.1:8000/  
Control-c to exit
```

# The Files of Your Project

Introduction

Django

Installation

Virtual Env

Setup Django

NewFiles

Output

Use Your Browser

Create Super User

Admin Controls

```
find . -not -path '*/\.*'
```

```
-----  
./mysite  
./mysite/manage.py  
./mysite/mysite  
./mysite/mysite/__init__.py  
./mysite/mysite/settings.py  
./mysite/mysite/urls.py  
./mysite/mysite/wsgi.py
```

## Notable Files

- `manage.py`: used to run the server
- `settings.py`: configuration file
- `urls.py`: used to connect url addresses to pages
- `wsgi.py`: web server gateway interface utils

Output

Use Your Browser

Create Super User

Admin Controls

- Need to make a user for the site.

```
python3 manage.py migrate  
python3 manage.py createsuperuser
```

- Migrate is to connect a database to the project to hold user (admin) data
- Username (leave blank to use 'user'): admin
- Email address: studentID@allegheny.edu
- Password: *"pass1234"*
- Password (again): *"pass1234"*
- Superuser created successfully.
- Now, look around the admin page,  
<http://127.0.0.1:8000/admin>

# Create a Super User to View Database
