Figure: How do constraints guide the completion of these puzzles?

Integrity Constraints

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity Constraints

DEFAULT CHECK UNIQUE

AgentsDE

Bond, James

onsider thi

- The CONSTRAINTS enforce conditions to restrict attributes to contain a *correct* type of data while inserting or updating or deleting.
- Integrity constraints provide a mechanism for ensuring that data conforms to guidelines specified by the database administrator.

Adding Constraints to CREATE TABLE

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity Constraints

DEFAULT CHECK UNIQUE

AgentsDb

Bond, James Bond

onsider thi

```
CREATE TABLE relationshipTable (
Attribute1 D1, (integrity-constraint 1),
Attribute2 D2, (integrity-constraint 2),
...,
Attributen Dn , (integrity-constraint n),,
```

- relationshipTable is the name of the table
- Each A_i is an attribute name in the schema of relation relationship Table
- D_i is the data type of values in the domain of attribute A_i
 - The D_i constrains the particular type of entry
- The integrity-constraint defines attribute application

Types of Affinity Constraints and Rules

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity Constraints

DEFAULT CHECK UNIQUE

AgentsDE

Bond, James Bond

Consider this

The affinity of a column is determined by the declared type of the column, according to the following rules in the below order (source: https://www.sqlite.org/datatype3.html

- If the declared type contains the string "INT" then it is assigned INTEGER affinity.
- ② If the declared type of the column contains any of the strings "CHAR", "CLOB", or "TEXT" then that column has TEXT affinity. Notice that the type VARCHAR contains the string "CHAR" and is thus assigned TEXT affinity.
- 3 If the declared type for a column contains the string "BLOB" or if no type is specified then the column has affinity BLOB.
- If the declared type for a column contains any of the strings "REAL", "FLOAT", or "DOUBLE" then the column has REAL affinity.
- **5** Otherwise, the affinity is NUMERIC.

Particular Constraints

Source: https://www.sqlite.org/datatype3.html

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity Constraints

DEFAULT CHECK UNIQUE

AgentsDE

Bond, James Bond

Consider thi

Keyword	Туре	Applies to Rule
INT INTEGER TINYINT SMALLINT MEDIUMINT BIGINT UNSIGNED BIG INT INT2 INT8	INTEGER	1
CHARACTER(20) VARCHAR(255) VARYING CHARACTER(255) NCHAR(55) NATIVE CHARACTER(70) NVARCHAR(100) TEXT CLOB	TEXT	2

Particular Constraints: Rules

AgentsDB

Bond, James

onsider this

Keyword	Туре	Applies to Rule
BLOB	BLOB	3
no datatype specified	DEOD	3
REAL		
DOUBLE	RFAI	4
DOUBLE PRECISION	NLAL	"
FLOAT		
NUMERIC		
DECIMAL(10,5)		
BOOLEAN	NUMERIC	5
DATE		
DATETIME		

Constraints General SQL: Data types

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zha

Integrity Constraints

DEFAULT CHECK UNIQUE

AgentsDE

Bond, James Bond

Consider this

- Note: In some varieties of SQL, the n may need to be defined
- In Sqlite3, we do not worry about defining n.
- **char**(*n*): Fixed length character string, with user-specified length *n*.
 - Used to store character string value of fixed length
 - The maximum num of chars (not important to SQLite3)
 - About 50 per cent faster than VARCHAR
- varchar(n): Variable length character strings, with user specified maximum length n.
 - Used to store variable length alphanumeric data
 - The maximum num of chars (not important to SQLite3)
 - Slower than CHAR

Integrity Constraints

Constraints are used to limit the type of data that can go into a table

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity Constraints

DEFAULT CHECK UNIQUE

AgentsDE

Bond, James Bond

onsider this

Common Constraints

- NOT NULL: To ensure that no NULL values are allowed
- DEFAULT: When none is specified, this constraint provides a default value for a column.
- CHECK: Ensures that all attribute values satisfy specified conditions
- UNIQUE: To ensure that all values of an attribute are different
- PRIMARY KEY: Uniquely identifies each row/record in a database table.
 - Also, ensures potential links exist (as designed) between two tables

Simple NULL constraint demo

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity Constraints **NULL** DEFAULT

DEFAULT CHECK UNIQUE

AgentsDE

Bond, James

onsider this

Spot the integrity constraint's influence

```
DROP TABLE IF EXISTS company;
CREATE TABLE company(
   Id text NOT NULL,
   Name text NOT NULL);
```

NOT NULL

VALUES (221, "Sherlock", 25, "10, Rue du fleur",100000);
```

Try to reinsert same values again

```
INSERT INTO company
VALUES (221, "Sherlock", 25, "10, Rue du fleur",100000);
```

```
INSERT INTO company
VALUES (NULL, "Sherlock", 25, "10, Rue du fleur",100000);
/* What errors did you find? */
```

Returning to Unique Constraints ... With UNIQUE Constraint

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity Constraint NULL DEFAULT CHECK UNIQUE

AgentsD

Bond, James Bond

Consider this

```
DROP TABLE IF EXISTS company;
CREATE TABLE company(
   ID INT UNIQUE NOT NULL,
   NAME TEXT NOT NULL,
   AGE INT NOT NULL,
   ADDRESS CHAR,
   SALARY REAL );
```

Add some data

```
INSERT INTO company VALUES (10, "Sherlock Holmes", 25, "221b Baker Street", 100000); %INSERT INTO company VALUES (10, "Sherlock Holmes", 25, "221b Baker Street", 100000);
```

- NULL and repeating UNIQUE values are not inserted
- A UNIQUE constraint ensures all values in a column or a group of columns are distinct from one another or unique.

Returning to Unique Constraints ... With PRIMARY KEY Constraint

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity
Constraints
NULL
DEFAULT
CHECK
UNIQUE

AgentsD

Bond, James Bond

Consider this

```
DROP TABLE IF EXISTS company;
CREATE TABLE company(
   ID INT PRIMARY KEY,
   NAME TEXT NOT NULL,
   AGE INT NOT NULL,
   ADDRESS CHAR,
   SALARY REAL );
```

Add some data

```
INSERT INTO company VALUES (10, "Sherlock Holmes", 25, "221b Baker Street", 100000); %INSERT INTO company VALUES (10, "Sherlock Holmes", 25, "221b Baker Street", 100000);
```

- NULL and repeating UNIQUE values are not inserted
- A UNIQUE constraint ensures all values in a column or a group of columns are distinct from one another or unique.

Defining a New Table with a Primary Key

Introduction to Database Systems: CS305 Constraints and Integrity

Oliver Bonham-Carter Hang Zhao

Integrity Constraints NULL

NULL DEFAULT CHECK UNIQUE

AgentsDE

Bond, James Bond

Consider this

```
ID is unique, Salary bound by numbers
```

```
/*Two constraints?*/
DROP TABLE IF EXISTS Employee;
CREATE TABLE Employee (
   ID CHAR PRIMARY KEY,
   name VARCHAR NOT NULL,
   dept_name VARCHAR,
   salary NUMERIC
);
```

```
/*****PSSST! Now Add some secret information **********************/
INSERT INTO Employee VALUES("001","Jimmy", "secretService", 1000000);
INSERT INTO Employee VALUES("002","Stevie", "secretService", 1000000);
INSERT INTO Employee VALUES("003","Frankie", "secretService", 10);
INSERT INTO Employee VALUES("004","Robbie", "secretService", 10A);

/* Oops! Robbie's salary information has a typographical error*/
INSERT INTO Employee VALUES("004","Robbie", "secretService", 100);
INSERT INTO Employee VALUES("004","Jamie", "secretService", 500);
/* Error: UNIQUE constraint failed: Employee.ID */
/* Huh?! */
```

Where are these keys? Part 1

Primary versus Unique Keys Part 1

Introduction
to Database
Systems:
CS305
Constraints
and Integrity
Constraints

UNIQUE

Comparison Basis	Primary Key	Unique Key
Basic	The primary key is used as a unique identifier for each record in the table.	The unique key is also a unique identifier for records when the primary key is not present in the table.
NULL	We cannot store NULL values in the primary key column.	We can store NULL value in the unique key column, but only one NULL is allowed.
Purpose	It enforces entity integrity.	It enforces unique data.
Index	The primary key, by default, creates clustered index.	The unique key, by default, creates a non-clustered index.
Number of Key	Each table supports only one primary key.	A table can have more than one unique key.

Primary versus Unique Keys Part 2

Introduction to Database Systems: CS305 Constraints and Integrity Constraints

Oliver Bonham-Carter Hang Zhao

Integrity Constraints NULL

DEFAUL CHECK UNIQUE

AgentsDE

Bond, James

Consider thi

Value Modification	We cannot change or delete the primary key values.	We can modify the unique key column values.
Uses	It is used to identify each record in the table.	It prevents storing duplicate entries in a column except for a NULL value.
Syntax	We can create a primary key column in the table using the below syntax: CREATE TABLE Employee (Id INT PRIMARY KEY, name VARCHAR(150), address VARCHAR(250))	We can create a unique key column in the table using the below syntax: CREATE TABLE Person (Id INT UNIQUE, name VARCHAR(150), address VARCHAR(250)

THINK

- Can you build a new database table with two (or more) types of constraints?
- For instance, try to alter an earlier database for which you have the build file to recreate it (in case anything goes dreadfully wrong)
